

WAZUH + Suricata Integration

Lab Created By : Sayed Waqar Ali Bacha

Linkdin: https://www.linkedin.com/in/waqar-ali-8a5b6b228

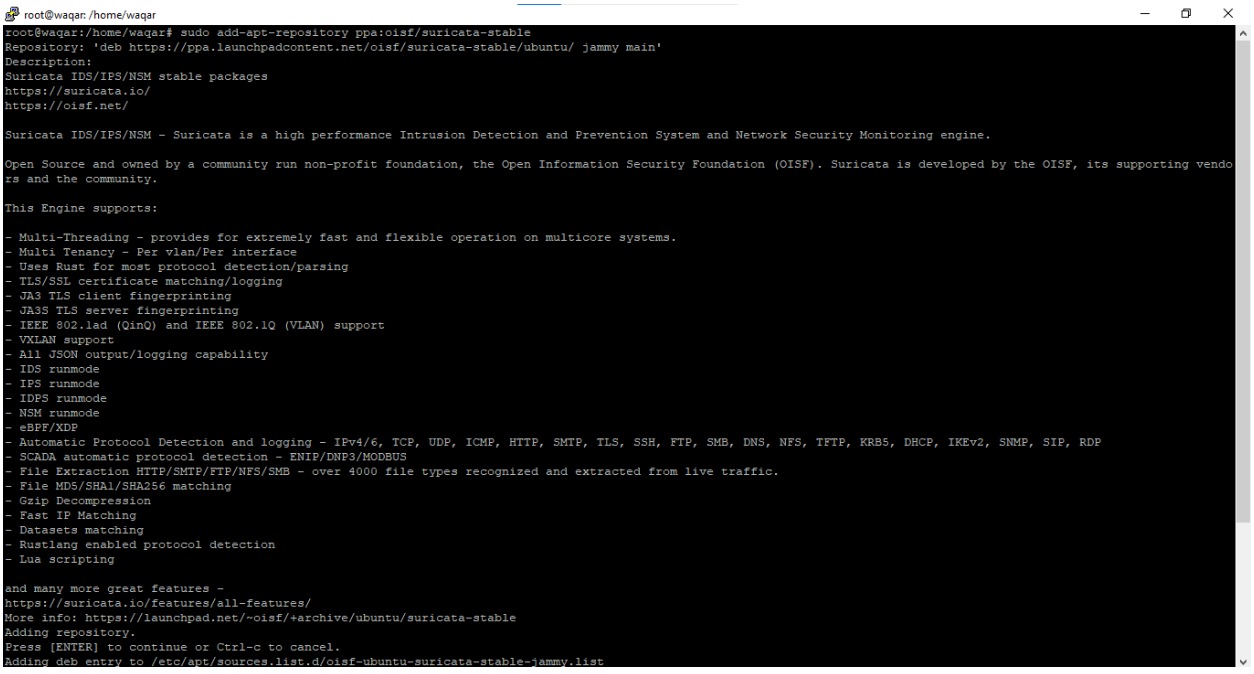

GitHub: https://github.com/waqar5289

1. First Set Up Ubuntu Machine Where we have to install Suricata. I have Installed Ubuntu Live Server and assessed It Through Putty.

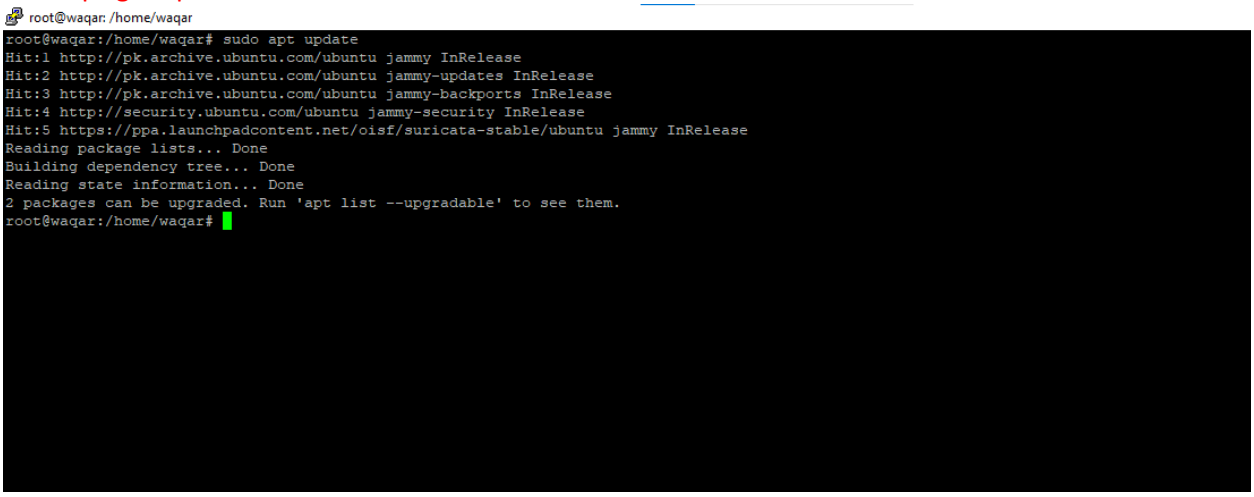

2. We will adding the Suricata Stable PPA Repository for full feature support and ongoing updates.

sudo add-apt-repository ppa:oisf/suricata-stable

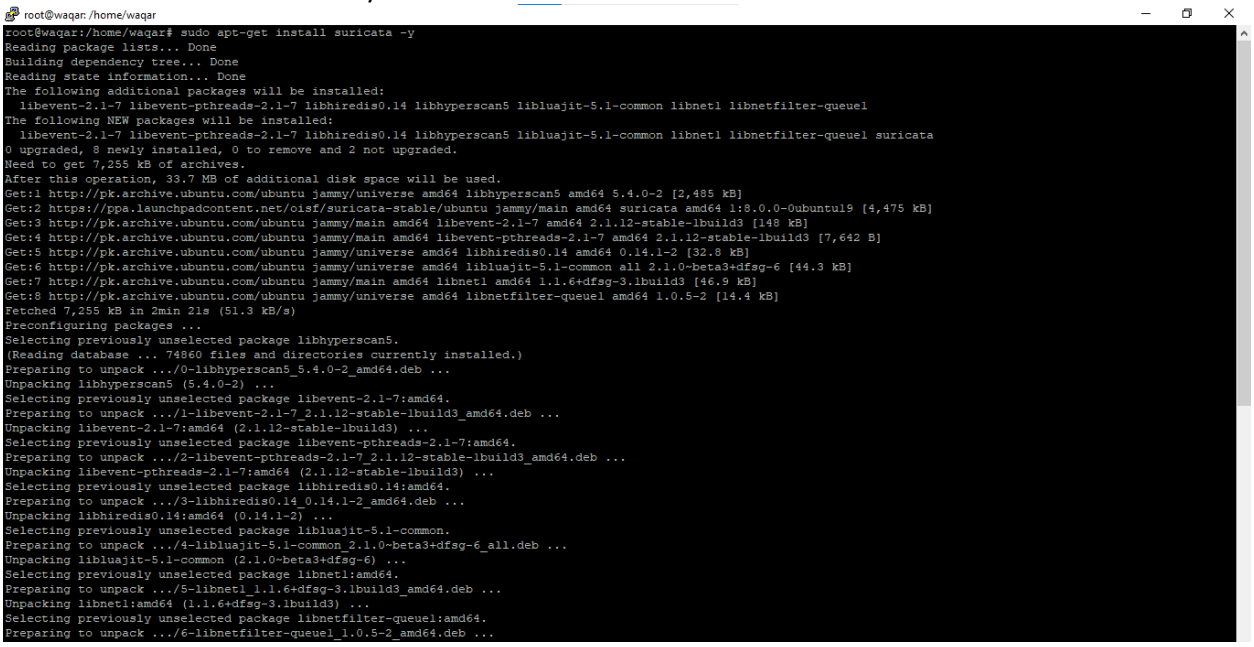

3. Then Update Your System.

sudo apt-get update

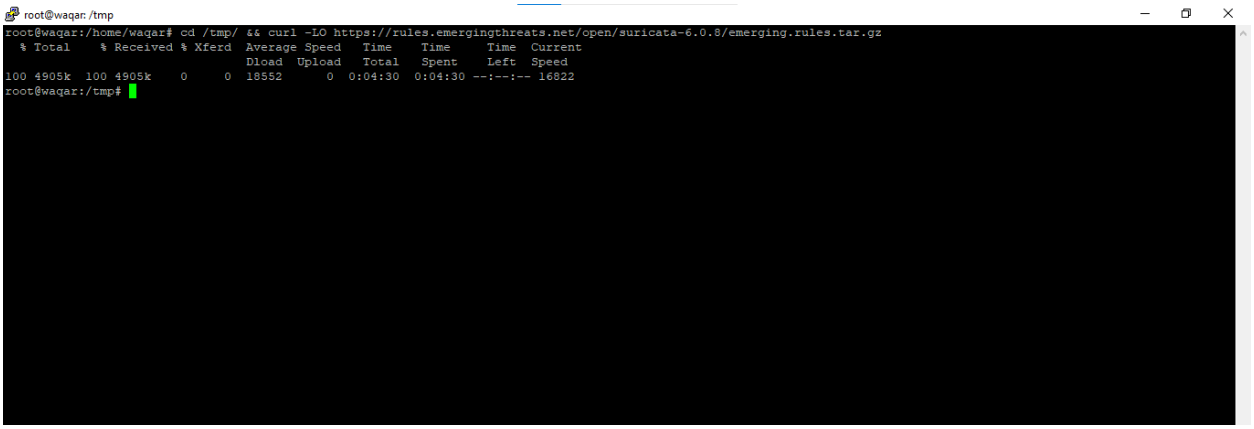

4. After that Install Suricata in your Ubuntu Machine.

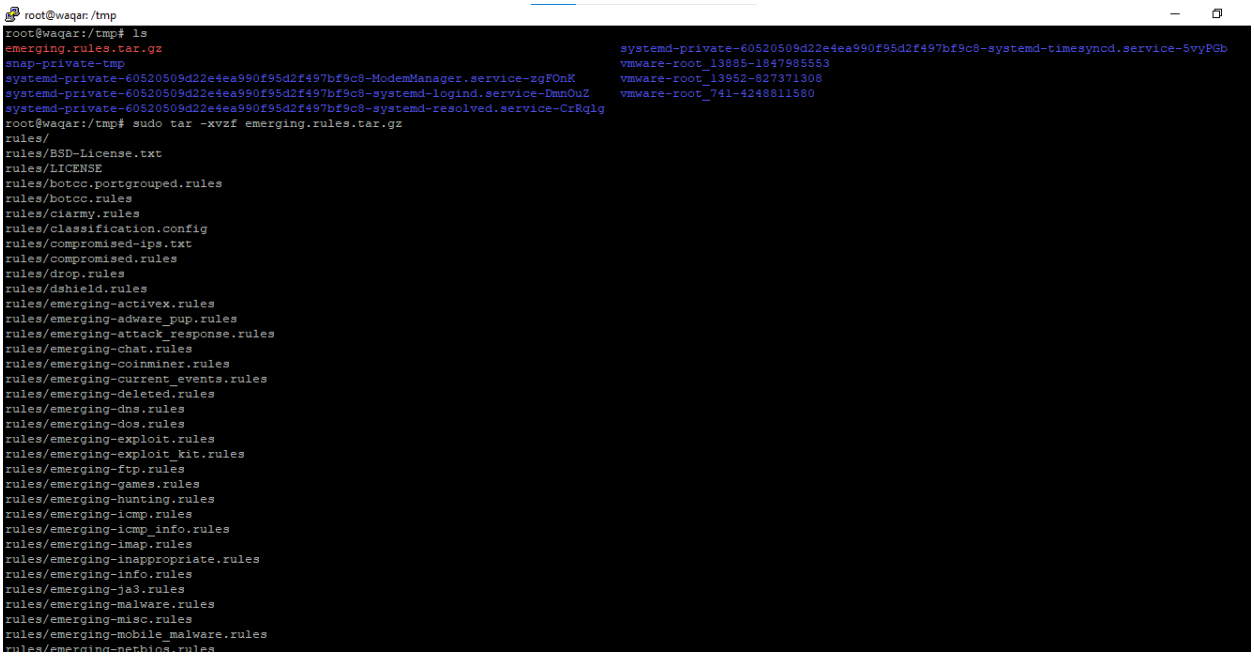

5. Now we will Downloading Emerging Threats Ruleset for Suricata.

cd /tmp/ && curl -LO https://rules.emergingthreats.net/open/suricata-6.0.8/emerging.rules.tar.gz

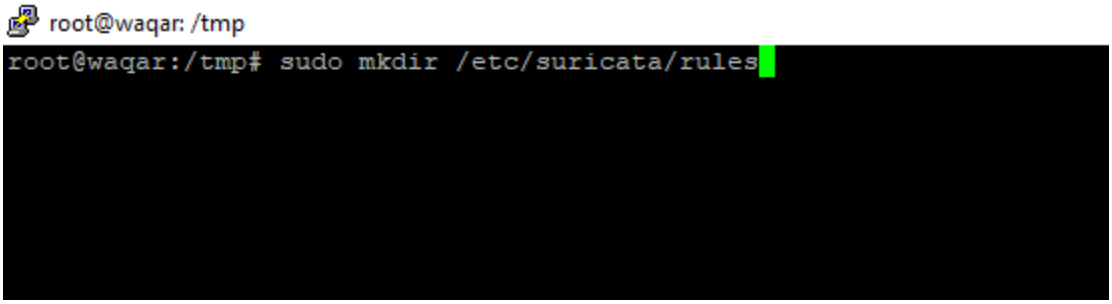

6. After downloading the Emerging Threats Open ruleset**,** now we will extract it.

sudo tar -xvzf emerging.rules.tar.gz

7. Before we can load custom or third-party rule files like those from Emerging Threats, we need to ensure that Suricata has a dedicated directory to store them.

sudo mkdir /etc/suricata/rules

8. We Will Move Rules into Suricata's Rules Directory.

sudo mv rules/*.rules /etc/suricata/rules/

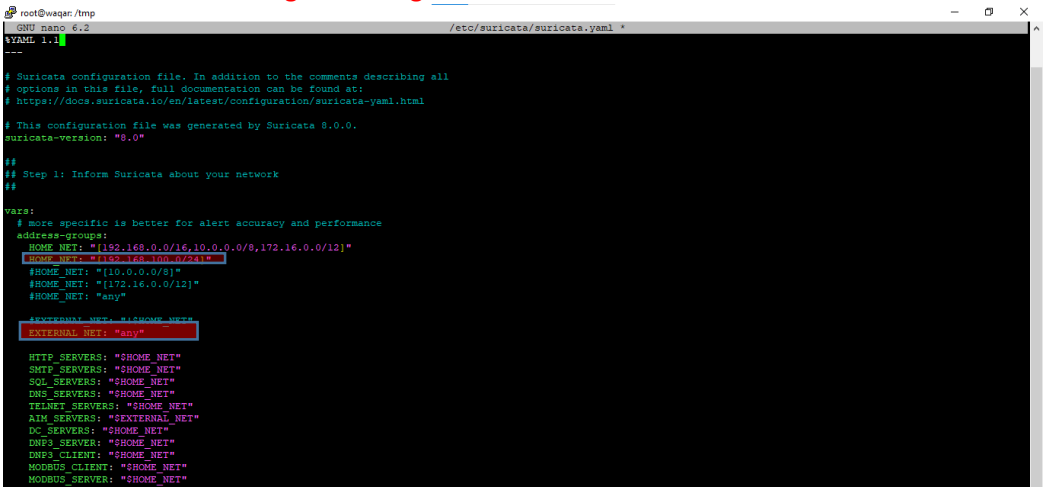

9. To secure the rule files and ensure only the appropriate users and services can access them, we set restrictive file permissions using the following command.

sudo chmod 640 /etc/suricata/rules/*.rules

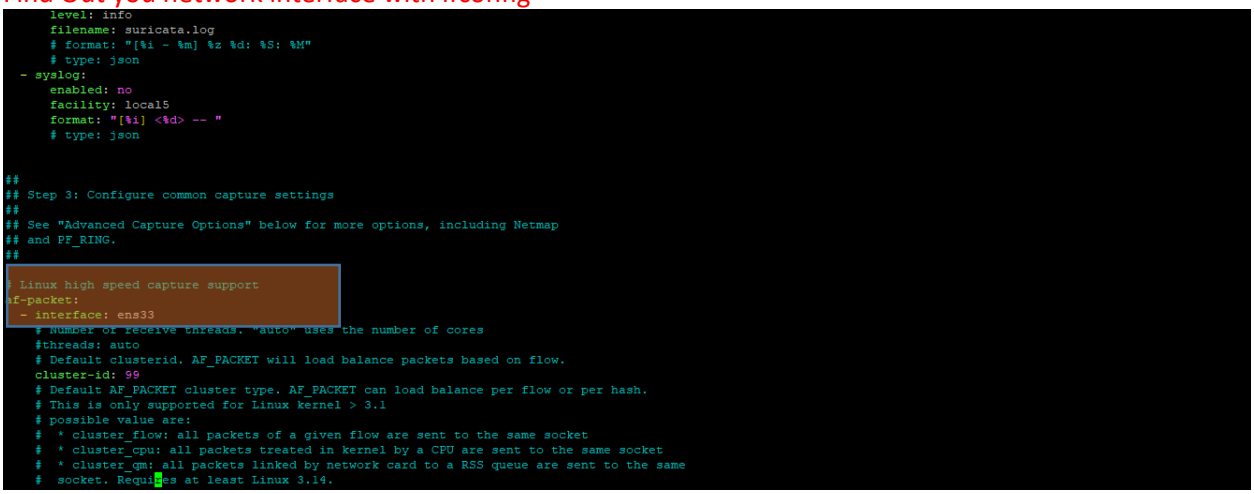

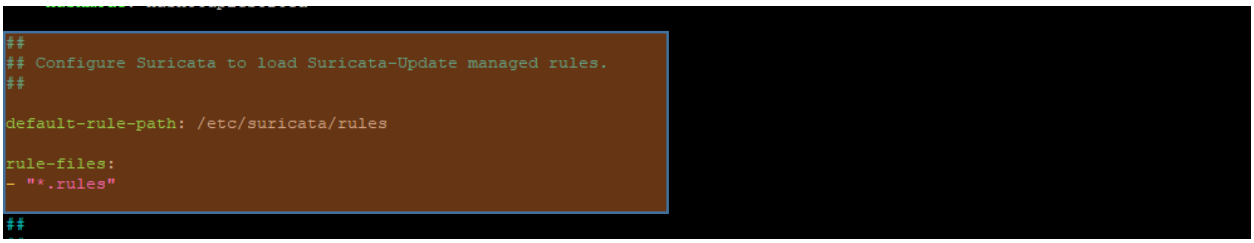

10. GO to Suricata settings and modify (/etc/suricata/suricata.yaml) file.

Make Sure The following According to Your Network

Find Out you network interface with ifconfig

11. Restart the Suricata service.

sudo systemctl restart Suricata

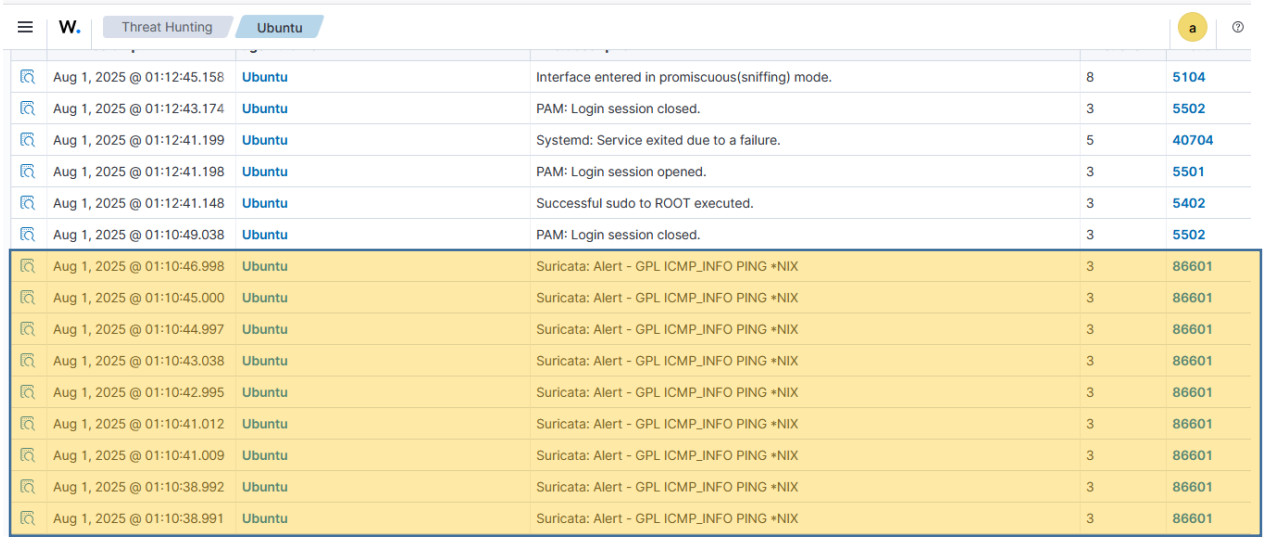

12. Now we have to configure suricata logs into Wazuh-agent “ossec.conf” file. Go to (/var/ossec/etc/ossec.conf) file of the Wazuh agent.

13. After saving restart wazuh agent.

sudo systemctl restart wazuh-agent

14. Then after ping your network to see alerts on wazuh dashboard.
